

THE CROWN
FOR YOUR
KITCHEN

REGINOX

STAINLESS-STEEL WORKTOPS

VERY STRONG

It is very hygienic, easy to clean and very solid. Reginox produces precision-made worktops using this top-grade material in any design you want and with an eye for detail and quality.

Stainless-steel sinks are neatly welded in, creating a unique look. Options include seamless welded kitchen islands, integrated cooking hob cut-outs, recessed, corner and column cut-outs.

Depending on the thickness, Reginox can also seamlessly produce the worktops themselves. Reginox distinguishes between 4 mm solid stainless-steel worktops and mounted stainless-steel worktops.

TOUGH MATERIAL

STAINLESS-STEEL IS THE TOUGHEST AND MOST DURABLE MATERIAL YOU CAN CHOOSE FOR A KITCHEN AND IT OFFERS ALL KINDS OF PRACTICAL BENEFITS.

Design with an eye for
detail and quality

MAINTENANCE

THE LIFESPAN OF A STAINLESS-STEEL SINK OR WORKTOP CAN EASILY BE EXTENDED BY REGULAR MAINTENANCE OF THE MATERIAL. THIS PREVENTS DIRT AND LIMESCALE FROM BUILDING UP IN THE SINK.

For daily maintenance, we advise using clean water with the addition of mild soap if necessary. To remove coffee, tea and grease deposits, use a liquid detergent. This way, the sink and worktop can be maintained daily.

MAINTENANCE RESOURCES

Regi-Clean descaler

Cleans hygienically and gives a bright shine. Suitable for taps, sinks, cabinets, acid-resistant tiles, countertops, glass and plastic surfaces. No more limescale thanks to this descaler.

Regi-Clean oil coating

Protects stainless-steel worktop and sink from grime, stains and fingerprints. Cleaning becomes much easier with Regi-Clean oil coating. Suitable for worktops and sinks made of stainless-steel, granite and ceramic as well as powder coated and PVD sinks.

Inox Care

Use Inox Care to care for, protect and maintain your sink and stainless-steel worktop. Carefully polish out this paste in the sink or on the stainless-steel worktop to remove various stains and restore the shine of the stainless-steel.

WE CAN
MANUFACTURE
A CUT-OUT FOR A
COOKING PLATE

INTEGRATED OPTIONS

REGINOX CAN MANUFACTURE A CUT-OUT FOR HOB PLATE IF REQUIRED. DEPENDING ON THE CUT-OUT, THE HOB PLATE CAN BE INSTALLED IN TWO WAYS: INTEGRATED OR INSET. FURTHER OPTIONS INCLUDE RECESSED SECTION AND A SINGLE OR DOUBLE SOCKET IN THE EDGE PROFILE.

Corner Joint

There are three possibilities to choose from, when connecting the corners:

- a welded seam
- a connection with bolts
- a (virtually seamless) adhesive-seam mitre joint

The adhesive-seam solution is especially suitable when welding could adversely affect the quality of the final product, or when the dimensions are so large that transport or installation as a single unit poses problems.

4 MM SOLID STAINLESS-STEEL WORKTOPS

ROBUST AND SOLID STAINLESS-STEEL OFFERS INFINITE FLEXIBILITY WHEN DESIGNING YOUR KITCHEN. WORKTOPS CAN BE MANUFACTURED ENTIRELY SEAMLESSLY IF REQUIRED AND UP TO A LENGTH OF 6 METRES.

Stainless-steel Support Walls and Frames

A worktop can rest on the supporting cabinets, but this is not always necessary. If a worktop is not fitted with supporting cabinets, it can be supported by so-called support walls, which are also made of stainless-steel. These support walls are available in different lengths, widths and depths and can be customised to a customer's requirements. If required, Reginox will also supply customised frames.

Stainless-steel Back and Side Panels

Reginox will supply stainless-steel panels and back or side panels in a variety of finishes.

Installation Sinks

Almost all Reginox sinks can be welded in seamlessly.

Worktop Options

Straight worktop, corner worktop, U-shaped worktop, high-backed, backed, block profile, rounded finish, cut-out for hob top, tap hole, corner, cut-out for column, island worktops. The possibilities are endless.

THE EDGES ARE ALL-ROUND GROUND AND POLISHED

Besides matt brushed, you now also have the option of hot-rolled: the purest form of stainless-steel. A splashback is not possible with this type of worktop.

Edging Finishes

The edges of the 4 mm solid worktops (matt brushed or hot-rolled) are all-round ground and polished.

Matt Brushed

With a matt brushed worktop, the surface of the stainless-steel is sanded or ground. This creates a nice, even and matt surface.

Hot-Rolled

Countertops made of hot-rolled stainless-steel retain their natural properties and are even less susceptible to scratches. Minor imperfections in colour and texture are possible.

4 MM SOLID HOT-ROLLED

4 MM SOLID MATT BRUSHED

Edging Profiles

Reginox can make worktops with various edging profiles to give them a more attractive appearance. The edge thickness of a worktop ranges from 12 mm to 40 mm. The mounted stainless-steel worktops are supplied as standard without splashback and including adhesive-fitted MDF.

Matt Brushed

With a matt brushed worktop, the surface of the stainless-steel is sanded or ground. This creates a nice, even and matt surface.

Non-Directional Brushed

The surface is machined with a non-directional ground texture, resulting in a matt effect. By applying this effect, scratches and fingerprints are less visible.

A textured surface finish

The stainless-steel worktop is eccentrically brushed using a special technique, which gives the worktop a variety of light scratches. This gives both a very attractive result and helps to hide any scratches that may appear over the years.

Welding Sinks in Place

Almost all Reginox stainless-steel sinks can be integrated seamlessly by welding.

MOUNTED STAINLESS-STEEL WORKTOPS

AS STANDARD, MOUNTED WORKTOPS ARE SUPPLIED IN 1.2 MM MATT BRUSHED OR TEXTURED SURFACE FINISH STEEL. MOUNTED WORKTOPS CAN ALSO BE SUPPLIED IN THE NON-DIRECTIONAL BRUSHED FINISH FOR AN ADDITIONAL COST.

STANDARD STAINLESS-STEEL WORKTOPS

EASY
TO CLEAN

Reginox' standard stainless-steel worktops are available in different lengths and depth sizes. The thickness of the worktop is 27 mm and the thickness of the stainless-steel ranges from 0.7 to 0.8 mm. The standard stainless-steel worktops are available with single or double sinks.

Reginox' standard stainless-steel worktops can be supplied with a ribbed surface, backsplash, cut-out for hob top and/or tap hole(s), if required. A tilted upright at the rear of the worktop is also an option.

The standard stainless-steel worktops are all fitted with robust adhesive-mounted FSC®-certified wood.

DIAMOND

MATT BRUSHED

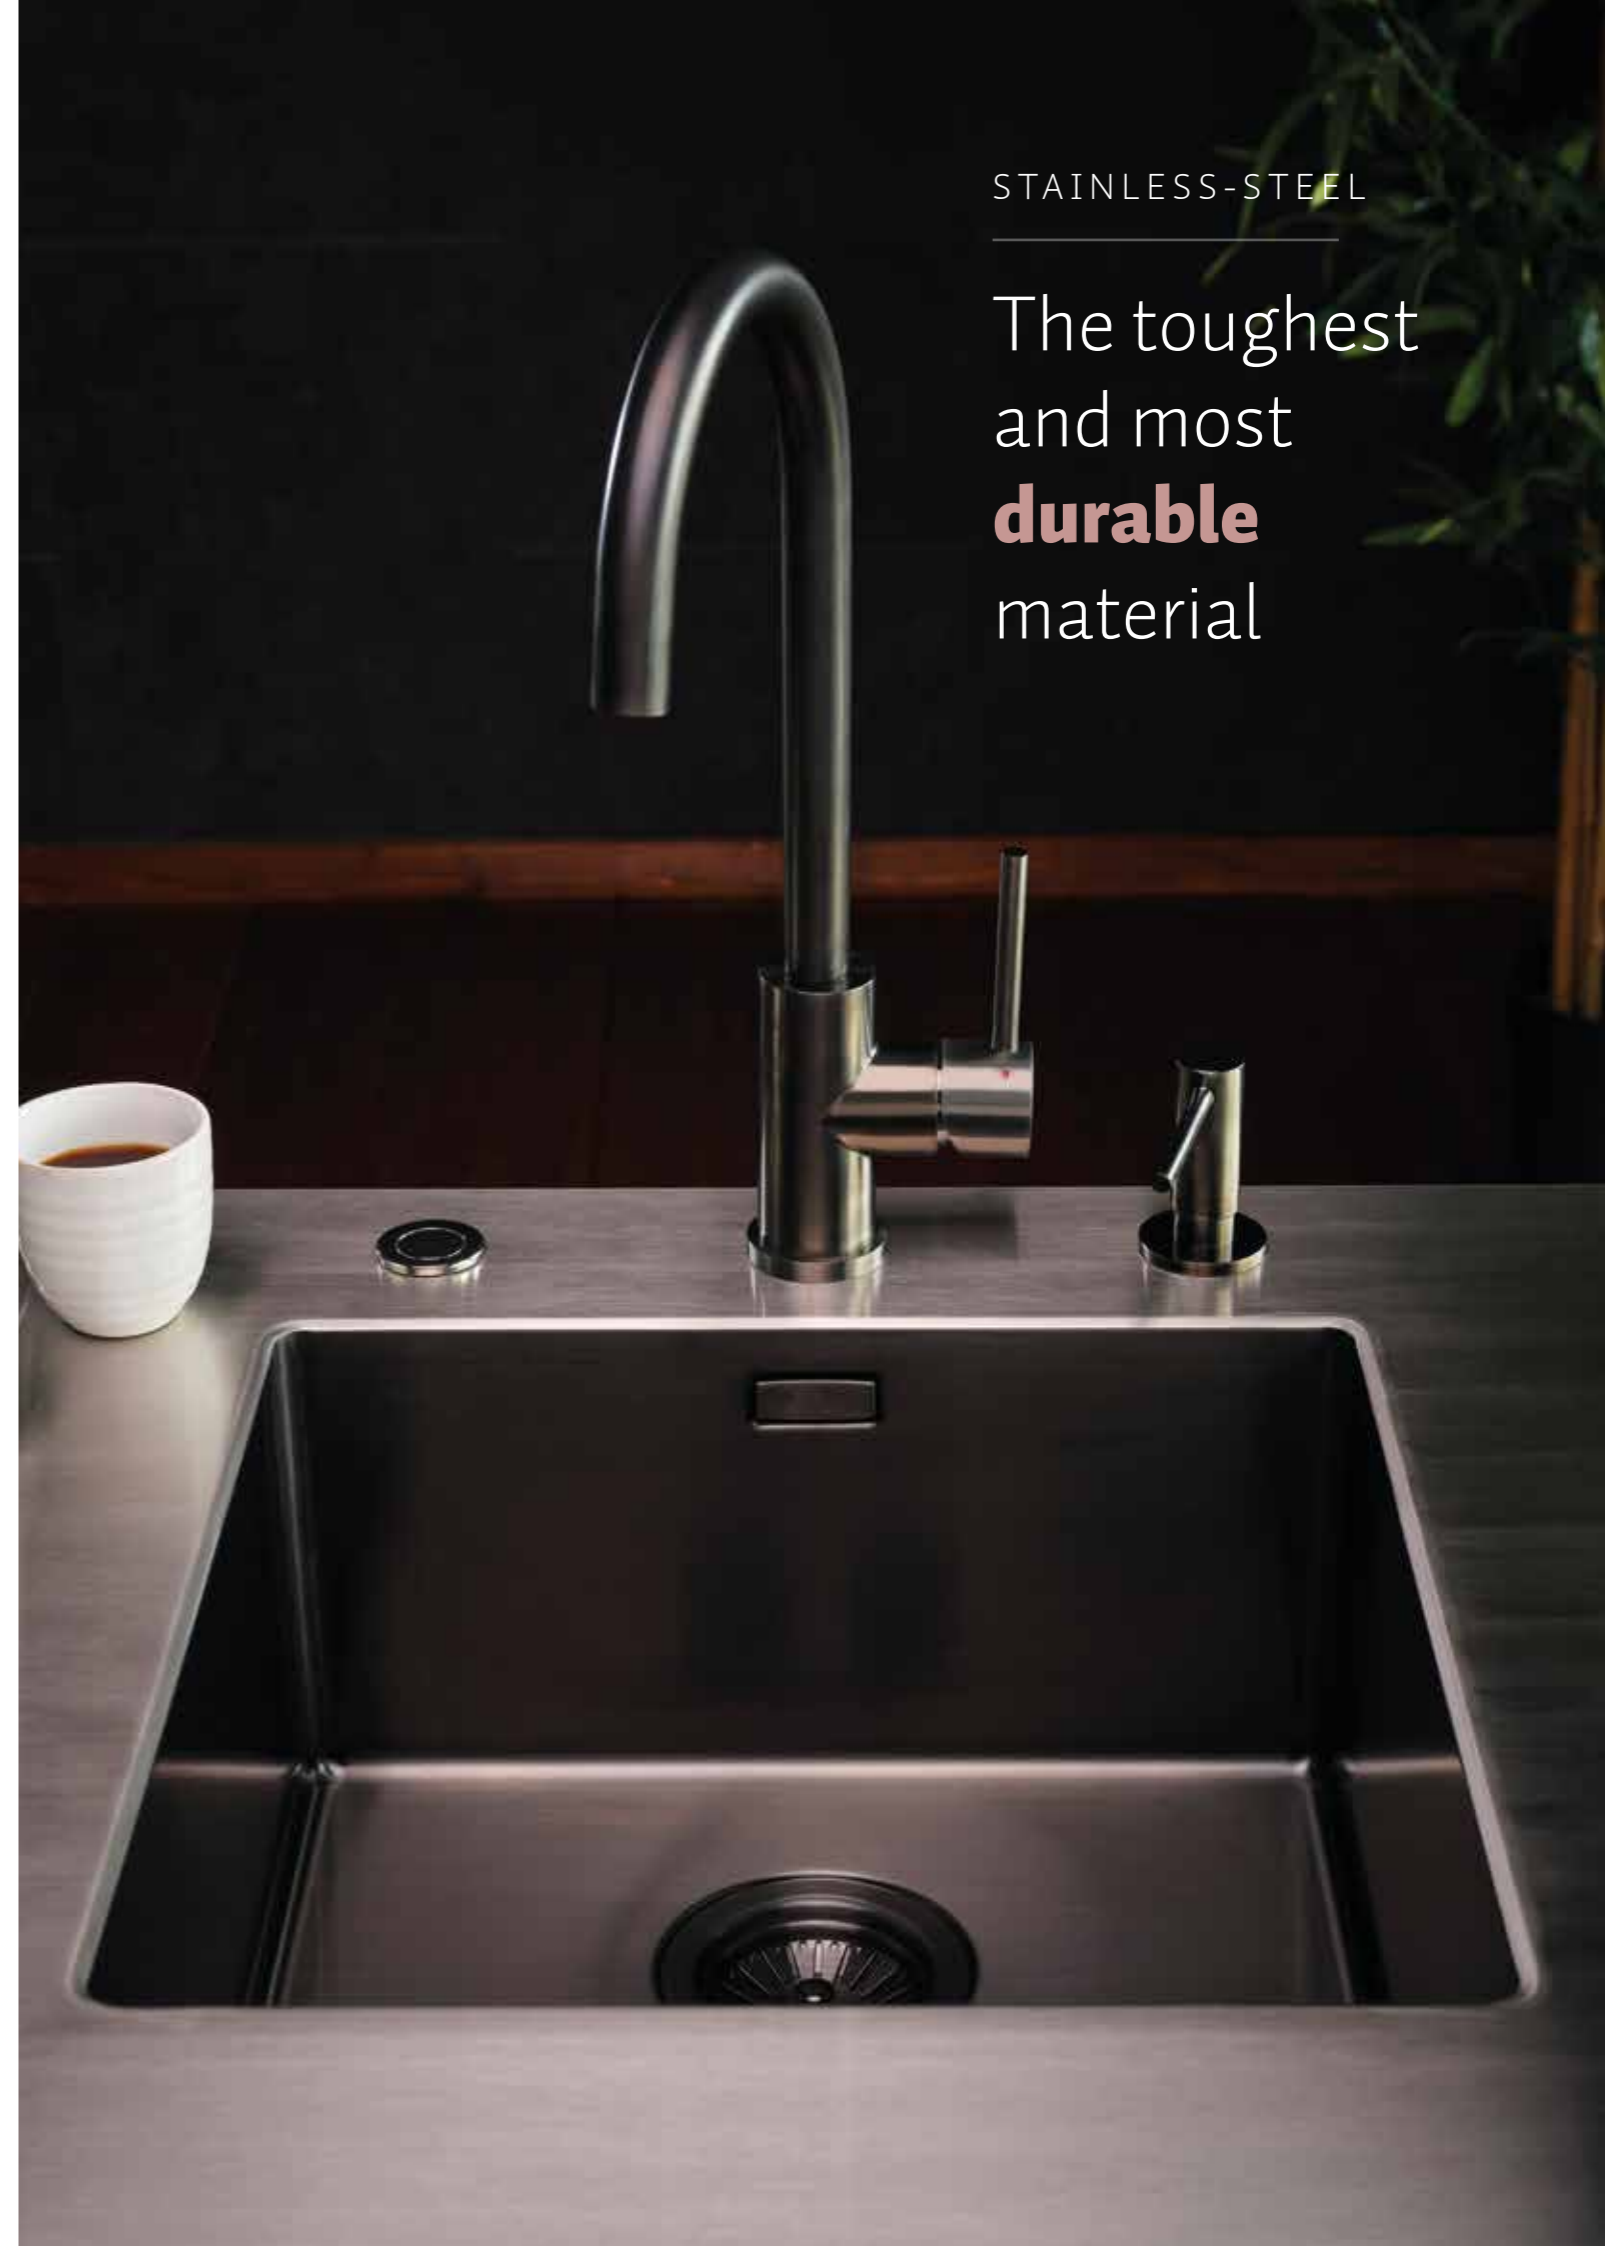

Finish

Our standard stainless-steel worktops can have a finish in either a diamond- or stainless-steel flat mirrored finish. The embossed diamond finish makes scratches much less visible.
